Yes! Randy's instructions helped me pull up the gamma scans they're doing, just like he said we could. Linda scheduled a meeting for the Team to get together & discuss data management needs on Sept. 4-- I'm sure we'll discuss more then...

Check it out - it already includes the mine boundaries and names for mines on the entire reservation! Looks like something we could all use.

Subject: Haystack #1 AUM assessment

If interested, check out:

www.epaossc.org/haystack1

Across the top tool bar you will see 'map'. Click on that. Once the map loads, on the right middle under bookmarks, click on Haystack No.1 AUM. Like google earth, on the left, under layer visibility, select Haystack No.1 AUM and expand the layer by clicking on the triangle.

Turn on the gamma scans from days past or today. If you have today on, it should update every 5 minutes, so you can track progress. We are using 4 meter / probe combos. We have up to 180 acres to cover.

As we process other info, our sampling and Geoprobe data will be added.

Enjoy, comments welcome.

Forward as needed.
